HTML & CSS

EMPLOYMENT HISTORY

Full Stack Web Developer, Flowbiz, Tel Aviv

AUGUST 2019 – PRESENT

As a full stack developer I took on tasks that span across our tech stack and activities:

- Boost performance and improved code readability and organization by migrating our front end wizard application from AngularJS to React, using a TDD approach.
- Reduced development time by automating tests generation from JSON data files to Protractor tests.
- Ensured quality code delivery by creating CI/CD pipelines from development through staging, to development.
- Ensured high standard development and code writing according to best practices by creating a number of customized application starters, using a range of various technologies, and including all the different layers of the needed stack such as state management, authentication, testing, documentation generation, and style libraries.
- Added core functionality to our business logic in NodeJS.

- Developed and maintained front end applications in React and Vue for our clients, with Firebase services as a back end.

IT Consultant and Web Developer, IsraelMM, Tel Aviv

JANUARY 2019 – PRESENT

Designed, developed and maintained a full stack application to analyze, visualize, and manage data of a governmental funded project to enhance circular economy in various industries throughout Israel.

The app proved itself as key in winning in the project's pilot year between four contesting franchisers.

App build using NodeJS (Express), React and PostgreSQL stack.

EXTRA-CURRICULAR ACTIVITIES

Personal Project, Pomegranate's Pantry

An application to manage household grocery shopping in a communal way, in order to save money and decrease traveling and plastic wrappers. The app is build using Ionic and React, and uses Firebase to handle all back end needs including authentication and DB. Sign in with Google is also implemented. A new technology I learned for this project is RxJS.

- TypeScript
- Ionic - React
- Firebase
- CSS
- HTML

Freelance work, Agra Planning & Consulting, Tel Aviv

A Gatsby static website for Agra Planning and Consulting LTD. Contentful is used as a CMS. This is one of my first projects, which taught me a lot about deploying a live site, SEO, performance and more.

- Gatsby
- JavaScript
- CSS
- Contentful

Live - <https://www.agraconsulting.co.il/>

Source - https://github.com/OPerel/new_agra_site

Personal Project, Parallax Blog

A blog made with Gatsby and Markdown. This is my first attempt with parallax animations which I always loved, using React Scroll Parallax. The rest of the layout and styles are implemented using Styled Components which was fun to learn and a useful technology to have in my toolbox.

- Gatsby
- Styled Components
- JavaScript
- React Scroll Parallax

Volunteering, Koach LaOvdim, Tel Aviv

Wage calculator application made with Ionic and StencilJS. Implements an algorithm which takes in various parameters about college professors and calculates prospective wage differences before and after signing a new contract with their college.

- Ionic - StencilJS
- TypeScript
- HTML
- CSS

Live - <https://wage-calculator.netlify.app/>
